STATE AND LOCAL TAX BURDEN ANALYSIS EXECUTIVE SUMMARY FY 2006 TAXES

Idaho's revenue and taxation picture is typified by moderate to low overall taxes and a broad structure with good balance between tax components. Idaho relies principally upon three major taxes: income, sales and property.

On the basis of taxes paid <u>per person</u>, Idaho's overall tax burden ranks 46th nationally (out of 51) and 11th regionally (out of the 11 western states).

| RAN | <u> </u> | | <u>RANK</u> |
|----------------------|------------------------------|----------|----------------------------|
| Property tax 38 | 29.6% below national average | 9 | 15.9% below western median |
| *Sales tax 38 | 22.0% below national average | 9 | 33.8% below western median |
| Individual income 27 | 7.1% below national average | 5 | 2.8% above western median |
| Corporate income 30 | 23.5% below national average | <u>5</u> | 0.4% above western median |
| | | | |
| Overall ranking 46 | 23.1% below national average | 11 | 14.3% below western median |

Because of relatively low income in Idaho, the state's overall tax burden <u>relative to income</u> is 34^{th} nationally and 6^{th} among the 11 western states.

| Property tax31 | 12.9% below national average | 5 | 0.9% above western median |
|----------------------------|------------------------------|---|-------------------------------|
| Sales tax 26 | 3.5% below national average | 9 | 22.7% below western median |
| Individual income18 | 15.0% above national average | 4 | 24.2% above western median |
| Corporate income <u>23</u> | 3.4% below national average | 5 | 0.2% above western median |
| | | | |
| Overall ranking 34 | 4.9% below national average | 6 | exactly equals western median |

On an overall basis, Idaho taxes are slightly below the U.S. average on an income-based analysis, while the state remains significantly below the U.S. average on a per capita basis:

| | <u>Per \$1,000 of Income</u> | Per capita |
|-----------------------------------|------------------------------|------------|
| Idaho total tax burden | \$106.95 | \$3,076 |
| National average total tax burden | \$112.41 | \$4,001 |
| Western median total tax burden | \$106.95 | \$3,591 |

Because per capita income in Idaho is 19.2 percent lower than the U.S. average, ranking systems which compare taxes to income will show higher comparative taxes in Idaho than systems which are based on population.

Idaho's major taxes are well balanced. In 2006, property taxes raised 27.5% of overall tax revenue, while income taxes accounted for 31.6% (individual for 27.2% and corporate income tax for 4.4%), and sales tax accounted for 24.0% of our tax revenue. The proportions shifted away from sales tax and toward income tax this year with the expiration of a two year increase in the sales tax rate.

| * Reflects year with 5% sales tax rate in Idaho. | | |

TAX BURDEN IN IDAHO AND THE UNITED STATES - FISCAL YEAR 2006 IDAHO REVENUE SYSTEM - SUMMARY:

The Idaho revenue and taxation picture is typified by moderate overall taxes and a broad structure with good balance between tax components. When observed on a regional basis, Idaho is in the somewhat unusual position of relying on three major taxes (income, sales, and property), as opposed to the systems hinged on only two taxes that are found in each of our border states except Utah. On the basis of taxes paid per person, the breadth of the Idaho system, combined with rapid population growth, produces the effect of being moderate in most specific tax types, while ranking our overall per capita tax burden 46^{th} highest nationally and 11^{th} highest in the 11 western states. Idaho has relatively low income (with a rank of 46^{TH} nationally and 10^{th} out of the 11 western states), and this raises our tax burden relative to income. In fiscal year 2006, this measure of overall tax burden shows us ranking 34^{th} nationally and 6^{th} highest out of the 11 western states.

The Idaho tax system has tended to rely relatively less on property tax, and relatively more on motor vehicle taxes and income taxes in comparison to both regional and national practices. This year's pattern shows increased reliance on both corporate and individual income tax and decreased reliance on sales tax. This shift can be attributed to both a strong economy, which contributes to income tax revenue and the expiration of a temporary (two-year) increase in the sales tax rate, with only one month of collections at the previous higher rate. Similar overall patterns emerge using either income-based or population-based comparisons; however, our tax burden appears considerably lower when computed on a per capita basis. This reflects our relatively very low per capita income, which trails the national average by 19.2%.

A comparison of FY 2005 and FY 2006 Idaho tax burden shows the following for our major taxes:

- 1. Idaho's individual income tax burden increased between 2004 and 2005, going from 9.2% over the U.S. average in FY 2005 to 15% over the U.S. average in FY 2006, relative to total personal income. This is the highest relative burden for this tax since FY 2000, although it remains below typical ranges found during the 1990s. For this tax, Idaho's income based ranking increased from 22nd to 18th while our population based ranking increased from 30th to 27th.
- 2. Corporate income tax burden is highly volatile due mostly to variations in corporate taxable income. On an income basis, the relative burden in Idaho rose from 20.9% below the U.S. average in FY 2004 to 17.6% below in FY 2005 and then to 3.4% below in FY 2006. On a per capita basis, Idaho rose from 35.3% below the U.S. average in FY 2004 to 32.4% below this average in FY 2005 and then to 23.5% below in FY 2006.
- 3. Property tax burdens in Idaho did not change significantly in FY2006, and were 12.9% or 29.6% below U.S. averages, depending on whether

income or population is used as a basis for the measurement. The Idaho overall property tax burden remains at its lowest point since FY 1996. Property tax burdens shown in this report do not reflect the removal of most school M&O property taxes in 2006, since the legislation that enacted that change was subsequent to the tax collections used for this FY 2006 analysis.

- 4. Idaho's relative sales tax burden decreased significantly in FY 2006 due to the expiration of a two-year rate increase. On July 1, 2005, the beginning of FY 2006, the sales tax rate went from 6% to 5%. Because revenue collection lags by one month, FY 2006 included one month at the higher rate and 11 months at the lower rate. In FY 2006, the sales tax burden decreased from 8.5% above the U.S. average in FY 2005 to 3.5% below the U.S. average in FY 2006. On a per capita basis, Idaho's relative sales tax burden decreased from 11% below the U.S. average in FY 2006 to 22% below this average in FY 2006.
- 5. Idaho's relative motor vehicle tax burden (fuel taxes and licenses and registration fees) stabilized in FY 2006, remaining well above the national average in this category. Idaho's motor vehicle tax burden was 54.3% over the U.S. average, based on income, and 24.7% over the U.S. average on a per capita basis. Comparisons between states are difficult for these taxes, because some states require motor vehicles to pay personal property tax, in which case the amounts would be included in the property tax category. Idaho's motor vehicle registration fees are in lieu of property tax and tend to inflate the apparent relative level of Idaho motor vehicle taxes.

Idaho's major taxes traditionally have been well balanced. In FY 2006, property taxes raised 27.5% of overall tax revenue, while income taxes accounted for 31.6% (individual for 27.2% and corporate income tax for 4.4%), and sales tax accounted for 24.0% of our tax revenue. The proportional shares represented by each major tax showed less reliance on sales tax and greater reliance on income taxes in FY 2006.

Regionally, western states either do not have sales tax or tend to rely more on this tax than most other areas of the country. Except for the 2004 - 2005 period, during which Idaho had a higher sales tax rate in place, Idaho typically has had the lowest relative sales tax among western states using the tax. This pattern reoccurred in FY 2006.

Table 1 summarizes changes in tax collections in Idaho and nationally over the most recent two-year period.

Table 1: Change in Total Tax Collections FY 2005 - FY 2006

| Tax Type | Idaho - FY 2005/2006 Percent Change | U.S FY 2005/2006 Percent Change |
|-------------------|--|------------------------------------|
| Property | 7.4% | 7.0% |
| Sales | -4.4% | 7.3% |
| Individual Income | 17.5% | 11.5% |
| Corporate Income | 41.0% | 22.7% |
| Motor Vehicle | 3.7% | 3.7% |
| Overall | 7.7% | 9.0% |

METHODOLOGY:

Tax burdens throughout the nation can be compared by determining tax collections in proportion to the personal income in a given state and comparing this to the hypothetical tax generated by applying the national average tax rate to each state's income. In addition, a per capita tax burden can be determined by applying the national average per capita amount of any tax to each state's population. The result of these calculations is known as a state's tax capacity or tax potential, since the amount shown represents tax that would have been collected in each state if the tax rates for that state equaled the national average rate. This then tells us where each state stands in relation to the national average in terms of tax revenue generating ability.

If a state's potential tax or tax capacity is greater than its actual tax, that state is underutilizing its tax potential relative to the average state. Similarly, a state is overutilizing its tax potential if its actual tax collections exceed the potential determined from the average tax rate. The degree of over or under utilization is known as the tax effort, which is expressed as an index in relation to 100%, the point at which no over or under utilization is indicated.

Throughout this report, ranks are assigned with 1 equaling the highest taxes (or income on the per capita income chart).

NATIONAL CONDITIONS:

Total nationwide state and local taxes for fiscal year 2006 were \$1,195,254.0 million, up 9.0% since FY 2005. Total personal income increased 6.5% to \$10,633,358 million. The national average tax rate increased slightly from 10.98% in FY 2005 to 11.24% of income in FY 2006.

In 2006, total U.S. population increased by 0.8% to 298,755,000. The average overall per capita tax increased 8.2% to \$4,000.79.

States that typically overutilize most or all taxes tend to be the ones whose residents have high tax burdens. California, for instance, whose taxes precipitated a major tax revolt in the 1970s, overutilized property taxes by more than \$3.25 billion in 1977-1978. In fiscal year 2006 (and for many years) California was the largest **underutilizer** of property tax (\$9.9 billion).

Overall tax overutilization reached an extreme this year of \$31.2 billion in New York (33.7% over the U.S. average), while the greatest amounts of underutilization were \$13.3 billion in Texas and \$5.5 billion in Florida. Patterns for New York, Texas, and Florida have become ingrained over time. However, tax utilization does change in response to economic conditions, tax policy decisions, or merely single year aberrations.

The most significant overall tax burden changes in FY 2006 were in Arizona and Nevada, which dropped 10 and 16 ranks, respectively. Louisiana gained nine ranks. Idaho's overall tax burden ranks relative to both income and population decreased slightly.

Property tax rank changes were minimal this year, with no state's rank changing by more than four places.

Sales taxes decreased in Idaho, which fell nine ranks, the largest rank change in the U.S. Georgia rose seven ranks.

New Jersey increased 12 ranks, while Indiana decreased by seven ranks in the area of individual income tax in comparison to income.

It is important to place the most emphasis on long-term trends, since often, when state rankings swing back and forth from year to year, this is an indication of data continuity problems, reporting errors, and short-term economic or tax policy changes, rather than long-term changes in taxation patterns or policies.

DISTORTING FACTORS:

Each year states have one-time or atypical collections or refunds, which may be large enough to affect individual state rankings or even to distort national averages used to compute each state's tax burden. For this reason, long-term patterns of taxation should be ascertained by comparing states over several years. In addition, substitution of one tax for another may make the imposed tax appear higher. This effect is most apparent in states that have not enacted sales or income taxes. However, substitution of higher vehicle registration fees for personal property taxes on vehicles can alter apparent relative tax burdens (see: Idaho Revenue System - Summary).

For longitudinal analysis, all of the tax information presented in this study has been analyzed under the same methodology since the fiscal year 1984 study was prepared. Prior to that time, corporate and individual income taxes were combined, but identical utilization methodology has been employed back to fiscal year 1980. Reports beginning in 1980 are available from the Idaho State Tax Commission.

SUMMARY OF IDAHO'S TAX BURDEN:

Prior to 2002, the long-term pattern in Idaho had been a relative overall tax burden slightly above the U.S. average using income based analysis and significantly below the U.S. average on a per capita basis. In FY 2002, relative burden measured in comparison to income decreased substantially to 4.6% below the U.S. average. Since that time the relative burden has been stable within a narrow range. In FY 2006, this relative burden was 4.9% below the U.S. average. Our income based relative ranking dropped from 31st to 34th. Idaho's per capita ranking dropped from 43rd to 46th, and we remain significantly below the U.S. average using this measure.

In FY 2006, Idaho underutilized all taxes by \$229.6 million using income as a basis for comparison. This represents the greatest comparative underutilization since FY 1988.

The overall tax burden in Idaho in FY 2006 increased 1.0%, to \$106.95 per \$1,000 of income. Overall taxes increased 7.7% during this period. This increase in tax collections was mitigated by a 6.7% increase in total personal income over the same period. Our per capita taxes rose 5.1%, to \$3,075.81 for each person. National average taxes in FY 2006 were \$112.41 per \$1,000 of income (2.3% higher than in FY 2005) or \$4,000.79 for each person. Table 2 shows our tax effort and corresponding rank on a national level. An effort of 100% would indicate taxes equal to the U.S. average effective tax rate for a particular tax or overall.

Table 2: FY 2006 Idaho taxes in comparison to U.S. averages

| | Based on | Income | Based on Pop | ulation |
|-------------------|--------------|--------|--------------|---------|
| Type of Tax | Tax Effort % | Rank* | Tax Effort % | Rank* |
| Property | 87.1 | 31 | 70.4 | 38 |
| Sales | 96.5 | 26 | 78.0 | 38 |
| Individual Income | 115.0 | 18 | 92.9 | 27 |
| Corporate Income | 94.6 | 23 | 76.5 | 30 |
| Motor Vehicle | 154.3 | 5 | 124.7 | 11 |
| Overall | 95.1 | 34 | 76.9 | 46 |

*Note: Lower ranks equal higher taxes, with 1 being the highest.

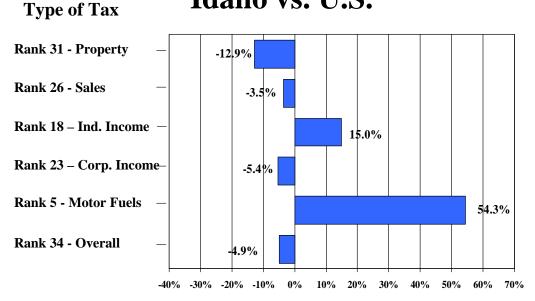

Per capita income in Idaho changed at a slower rate than the national average per capita income, dropping Idaho to 19.2% below the U.S. average. Ranking systems which compare taxes to income will show higher comparative taxes in Idaho than systems which are based on population.

Table 3 compares Idaho's tax and income ranks for the most recent five analysis periods and shows how many states utilize each tax (the District of Columbia is considered a "state" for the purposes of this chart and all rankings in this report).

Table 3: Relative income and tax ranks for Idaho since FY 2000
